

IT Infrastructure Service Outsourcing

IT Infrastructure outsourcing is in category of IT outsourcing. It mainly includes eight aspects, respectively as IT infrastructure consulting, planning and design, device model selection and purchase, system set up, hosting, network maintenance and renovation, maintenance, repair and upgrade of computer hardware and peripherals, desktop system maintenance, server system maintenance, as well as data center service.

One of the typical cases regarding IT Infrastructure outsourcing in Baosight for overseas clients is the comprehensive network cabling and system integration project for Italian Vetroarredo S.S. G. Glass Company in Shanghai Feng Xian District. For details of the project and more proven cases in the IT infrastructure outsourcing areas, please go to Case Studies.
